

Trauma Informed Care Best Practices Project

Disclaimer

The information contained in all the parts of the Trauma Informed Care Best Practices Project are already available to anyone interested in the international literature on the subject. The notions, information, scientific theories and intersectorial applications contained in all the parts of this project have been organized in order to be useful to all the people who in various capacities and with different professional background offer help and services to different clients/patients/service users in different settings, nations and cultures.

If the scientific knowledge and applications available through this project are freely accessible in the various scientific publications and data banks around the world, the applications of these notions and knowledge are regulated in different ways in the various countries by their laws, regulations and different codes of ethics of the various professional guilds and professional or voluntary associations, which often vary from country to country.

All the contents accessed through the Trauma Informed Care Best Practices Project are offered with the precise intention of respecting all the laws and regulations in force on the topics covered and no part of this course can be used or understood for the use for different purposes from what has just been underlined. It remains a duty and an imperative for every professional and organization to work always in science and conscience; this includes full compliance with the regulations in force in their country, respect for the specific competencies of other professions, awareness of one's own limits and knowledge and respect for the boundaries that outline their profession and their professional or paraprofessional role and competencies as well as the needed compliance with the internal rules of the organization in which they operate. The materials accessed through the Trauma Informed Best Practice Project, can be used freely mentioning the authors and the source and cannot be commercialized in any way.
